AMAWALK

CATALOGUE

1935

HOW TO REACH AMAWALK

AMAWALK is located in Westchester County, thirty miles north of New York. The entrance to the Nursery is opposite the railroad station at Amawalk, on the Putnam Branch of the New York Central. Amawalk is eight miles east of Peekskill on the Hudson River Division and five miles west of Katonah on the Harlem Division of the New York Central. Amawalk is located on the State Road from Briarcliff to Lake Mahopac and from Katonah to Peekskill. It is three miles east of the intersection of the Bronx River Parkway Extension with the Crompond-Peekskill Road.

Important Offer To Our Customers

We take pleasure in handing you herewith our new 1935 catalogue of Amawalk Trees.

In order to anticipate the volume of business we expect this spring, we are making the following offer:

For all trees selected and ordered during the month of March 1935, a discount of 20% from the catalogue price will be allowed. A deposit of 25% of purchase price will be required at the time the trees are selected and the order given.

After April first the prices in our catalogue will be in effect with no discount.

Very truly yours,

AMAWALK NURSERY

AMAWALK

IN the year 1890 Major Orlando Jay Smith, founder and President of the American Press Association and active in public spirited movements of his time, found a hobby in the growing of the finest trees to their ultimate beauty.

His enthusiasm for the hobby led him all over the world, and his estate at Amawalk became the embodiment of his highest inspirations. With his passing the estate, under the direction of his daughter, Evelyn W. Smith, was continued, until today it is represented by the Amawalk Nursery.

The fruit of his hobby was sought after and in time became available to friends and acquaintances, and later to communities, individuals and Landscape Architects. They recognize the vision and the ideal which, conceived many years ago, has reached its fulfillment in the large sized specimen trees today available at Amawalk.

Amawalk has been developed on the ideals of its founder into the largest big tree nursery in the world. These ideals are still its inspiration.

AMAWALK TREES

Amawalk was established over thirty years ago for the purpose of producing the finest large-sized ornamental trees that can be grown. It has since developed into the largest big tree nursery in the world.

Location

The location for the Nursery was most carefully selected with regard to soils, exposures and shipping facilities.

Soils and Exposures

Amawalk has over 1000 acres of the most fertile land in the hills of Westchester County, thirty miles north of New York City. On our hills we have light, dry soils and exposed situations, and in the low lands, rich, heavy ground and sheltered locations. Owing to these exposures and soils we are able to grow each kind of tree under the conditions most favorable to its development.

Climate Produces Hardy Growth

A more severe winter climate prevails at Amawalk than in New York City, due to an altitude of four hundred to one thousand feet, thereby producing a hardier growth in our trees than would otherwise be possible. We grow only those varieties of trees which we have proved to be absolutely hardy.

Scientific Development of Trees

The most scientific methods are used in the development of Amawalk trees. They are continuously cultivated, top-pruned, root-pruned and transplanted. Every tree listed in our catalogue has been growing at Amawalk for from ten to twenty-five years, during which time it has been many times transplanted in order to obtain the fibrous root development necessary to withstand its final transplanting with the least possible setback.

AMAWALK TREES

Only Developed Trees Offered for Sale

We do not offer any small-sized, immature trees for sale. Only those trees are catalogued that have received sufficient Amawalk training to enable them to assume the habits of the matured trees. The longer we grow our trees the finer they become; our 20 to 30 foot evergreens are heavier and older, and our 10 to 15 inch deciduous trees are more matured than are trees of similar size elsewhere.

Digging Trees

The greatest care is taken in the digging and handling of our trees, so as not to injure either the root system or the branches. Our most experienced men are in charge of the digging, the balling and the loading of the trees.

Loading Trees

No order is dug until just before the trees are to leave the Nursery. If the trees are to be delivered by truck, they are dug in the morning, loaded on the truck in the afternoon, and delivered as early as possible the next morning. When the order is to be shipped by freight, the trees are not dug until the freight car is on our siding.

Railroad Shipments

An advantage of our location on the Putnam Branch of the New York Central Railroad is that our freight shipments to the North, South, East and West do not have to be routed through New York City. Our shipments to the West make Albany the day after leaving Amawalk.

Planting Trees

We guarantee that every tree leaving Amawalk is in the best condition obtainable with scientific care and handling. To obtain the best results, this tree has to be planted on the purchaser's grounds in the soil and exposure best suited to its variety. It has also to be properly planted and receive adequate attention for the first year after transplanting or until its roots become re-established.

AMAWALK TREES

Advice in Regard to Care of Trees

Through a method of inspection of all trees planted within calling distance of Amawalk, we are in touch with the conditions of each tree we send out and give advice in regard to its care. These inspections are made periodically, and a record is kept in our office. To those customers who live too far from our Nursery to get the benefit of this service we give our best advice by letter, and endeavor to have a representative inspect their trees once or twice a year.

Advice in Regard to Planting

To our customers we are glad to give, without charge, detailed instructions in the planting and care of their trees, as well as advice as to what varieties of trees will do best planted on their estate.

Advice in Regard to Development of Property

We will, upon request, be glad to advise them as to how they can best obtain information as to the development of any part of their grounds.

A country place properly planted should increase yearly in value and beauty, and it is to this end that we are anxious to co-operate with our customers to obtain for them at an early date the full beauty and development of their trees.

Measurements, Prices, Delivery, Guarantee

Measuring Trees

Deciduous trees are measured by their caliper, diameter of the trunk 12 inches from the ground. As no two trees will make the same growth, the height of deciduous trees is approximated in this catalogue as closely as possible. Evergreens are measured by their height only.

Specimen Tree Standard

All trees listed in this catalogue measure up to the highest requirements of specimen trees. No inferior trees are grown at Amawalk.

A M A W A L K T R E E S

Selecting Trees

We are always pleased to have customers visit Amawalk and choose by tagging their own trees. As none but specimens are grown, customers are allowed to select any tree at the catalogue price for its variety and size. The price per tree is the same regardless of the quantity ordered.

Prices

The catalogue price of our trees includes their proper digging, balling when necessary, and loading on trucks or in freight cars, and are f.o.b. Amawalk. All evergreens and certain deciduous trees (such as Beech, Dogwood, and Hawthorns) are dug with a ball of earth around the roots. The balls of smaller sizes are secured with burlap, and the larger with a canvas bag and wooden platform. This insures the least possible disturbance of the roots.

Deliveries

The prices in this catalogue are f.o.b. Amawalk. Deliveries can be made by freight, express or motor truck. For freight shipment the cars are packed on our own siding. For less than carload shipment, packing is charged for at cost. For delivery by motor truck, cost price only is charged, this charge being based upon the size of the load and the distance it has to go.

Guarantee

We guarantee that every tree leaving Amawalk is in the best condition obtainable by scientific care and handling. If correctly planted in suitable location, and given adequate attention thereafter, it will live. As we have obviously no control over the treatment our trees receive after leaving our hands, we do not guarantee that they will live. To do so would mean increased prices and would place an unnecessary burden on those customers whose trees are properly cared for. However, to accommodate those purchasers who prefer their trees insured, we will for a pre-arranged premium agree to re-supply f.o.b. Amawalk any tree which fails to live one year after transplanting.

Deciduous Trees

Namely, those that yearly drop their leaves

Beech—Fagus

Amawalk Beech are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

EUROPEAN GREEN. *Fagus Sylvatica*

Native to England. The time is coming when the value of the European Beech will be as greatly appreciated in this country as it is in England, where it is one of the favorite trees for lawn and hedge planting. As a specimen it forms a large and majestic tree, with branches growing to the ground in contrast to the maples, oaks and other high branched trees. For hedge planting it has no equal, making a beautiful, permanent and impenetrable barrier. The old leaves remain until they are forced off by the new ones in the spring, and it is therefore as useful as the evergreens for a screen during the winter. Prefers a rich, loamy soil.

AMAWALK TREES

Cercidiphyllum

JAPANESE. *Cercidiphyllum Japonicum*

This is a rare and interesting tree to plant for a low screen. It grows about thirty feet high and is symmetrical in form, with many slender branches growing to the ground. Its greatest beauty is the foliage. In the spring the young leaves are copper-colored and in the autumn they turn to unusual shades of purplish red and yellow.

A M A W A L K T R E E S

Elm—*Ulmus*

AMERICAN. *Ulmus Americana*

The most characteristic of our native shade trees. It forms a noble avenue, the outward curve of the branches giving the effect of a Gothic arch. Prefers a moist well drained soil but is not too particular as to soil requirements. One of the best trees for immediate effect due to its rapid growth and the large size it attains.

Maple—Acer

NORWAY. *Acer Platanoides*

The Norway Maple is one of the most satisfactory trees for either street or lawn planting. It grows rapidly in even the poorest soil and most exposed situations, and suffers practically no setback after transplanting. It forms a large tree with a spreading head and deep green leaves which remain on the tree until November. The only condition in which the Norway Maple will not thrive is in wet ground. There it is safer to plant the Sugar Maple or Silver Maple. The Norway Maple is one of the best trees for city planting.

Maple—Acer

[Continued]

PYRAMIDAL SILVER. *Acer Dasycarpum Pyramidalis*

The best tree to plant where a rapid grower is desired for immediate effect. It is a new and superior variety of the Silver Maple, of compact, symmetrical form and remarkably quick growth. Thrives best in rich, heavy ground.

	Each

Japanese Maple—*Acer Palmatum*

The Japanese Maple forms a small low-branched tree, growing not more than twenty feet high. It is extensively used for its brilliant coloring and is most effective when several specimens are massed together.

Amawalk Japanese Maples are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

OSAKAZUKI. *Acer Palmatum Oskazuki*

The best variety to plant for fall coloring. The leaves are green in the summer and become red in the autumn. Forms a slender tree with broad head and irregular branches.

Oak—Quercus

It is generally considered that the Oaks are of very slow growth, and for that reason they are not planted as extensively as their beauty and vigor merit. This is a mistaken idea. The Oaks here catalogued make nearly as rapid growth as, for example, the Sugar Maple.

AMERICAN PIN. *Quercus Palustris*

The most rapid growing of the Oaks. It is a very beautiful variety, distinguished by its long, somewhat drooping branches. The foliage is deeply cut and turns orange and scarlet in the fall. Grows best in rich, well drained soil.
